

Carla Prieto

AI & Machine Learning Engineer | Founder, Yoseph AI

carla.prieto@berkeley.edu | 206.581.4834 | linkedin.com/in/carlaprieto | github.com/Carla08 | carlaprieto.com | San Francisco Bay Area, CA

EDUCATION

Master of Science in Entrepreneurship and Innovation (MSEI), University of San Francisco

In Progress

Master of Information and Data Science, University of California, Berkeley

August 2024

Bachelor of Science in Information Technologies Engineering, Tec de Monterrey (ITESM)

December 2016

TOOLS

Tools: Python, TensorFlow, Docker, Kubernetes, Airflow, NumPy, SciPy, Scikit-learn, Pandas, AWS (SageMaker, Bedrock, EC2, S3, Lambda), Google Cloud (GCP), Azure, Java, Kafka, SQL, Jupyter, Git, PyCharm, OpenAI API.

Machine Learning: LLMs, RAG, NLP, Embeddings, BERT, Distributed Training (DSP, FSDP), Supervised Learning, Deep Learning, CNNs, Classification, Clustering, Feature Engineering, Dimensionality Reduction, Cross-Validation, Model Evaluation

PROFESSIONAL EXPERIENCE

Yoseph AI | Founder

2026 – Present

- Founded and independently built an AI companion helping migrants navigate the U.S. immigration system, grounded in official government sources rather than general model knowledge.
- Built and shipped a small MVP end-to-end (Python/FastAPI, React, Supabase), now live in an early trial with real users.
- Leading ongoing product validation with graduate students and trusted visa holders, incorporating outside expert review ahead of scaling.
- Opened early conversations with immigration-focused investors and ecosystem partners.

Subbase | AI Engineer | Seattle, WA

Dec 2025 – Now

- Led development of an LLM-powered extraction system for invoices and quotes, improving structured data accuracy **from ~50% to 85%** and generating **\$40K+ in annual savings**.
- Built a human-in-the-loop retraining pipeline and an evaluation framework (precision, recall, F1, CER) for continuous model improvement and cross-provider A/B testing.
- Built backend services in Python supporting real-time and batch inference for document processing pipelines.

US Bank | Machine Learning Engineer | Seattle, WA

Jan 2025 – April 2025

- Migrated an on-prem MySQL database to Azure SQL, updating ML models and backend services and configuring secure pipelines moving 10TB of financial data daily through Kafka and Kubernetes.
- Updated CI/CD pipelines in GitLab to validate the new database connection.

HundredX | AI and Machine Learning Engineer | Seattle, WA

Feb 2022 – May 2024

- Led a cross-functional initiative turning customer feedback into actionable insights with NLP and LLM-based systems, retaining **\$120K+ in enterprise contracts**.
- Built and fine-tuned NLP models (BERT, Transformers) for topic modeling and sentiment analysis, achieving **93% accuracy** and improving performance by up to **33%** through experimentation.
- Delivered insights to clients via Tableau dashboards and SQL pipelines, processing 10K+ comments daily through Airflow, Docker, and Kubernetes.

Amazon | Software Engineer | Seattle, WA

July 2019 – Dec 2021

- Built ML-powered data pipelines and models for Amazon Go, helping land contracts valued at over **\$5M** and reducing checkout errors by 10%.
- Designed an end-to-end test suite and CI pipeline that saved 3 hours of manual engineering work weekly.

Spectrum Effect | Software Engineer | Monterrey, NL, Mexico

Jan 2017 – July 2019

- Implemented machine learning algorithms to identify network issues for 3 major US cellular carriers, leading to contracts over **\$500K**, with classification models reaching **96% accuracy**.
- Built DevOps practices and pipelines to reliably process 3TB of binary data every 15 minutes.
